

For any requirement a proper solution

Since more than 45 years cab develops and manufactures solutions and a large amount of accessories for product marking. The product range includes label printers, print & apply systems, label dispensers and marking laser systems. In addition, cab provides ribbons and labels for the perfect imprint.

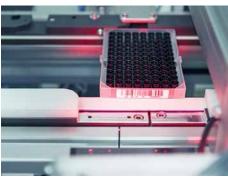

PRODUCTS NEED LABELING

In the automotive sector, labeling ensures traceability of components to the smallest screw. In logistics, it guarantees scheduled delivery. On electrical devices, typeplates refer to performance data and use. Pharmacy sees labeling prevent from errors relevant to health, in chemistry it points out to risks associated with the handling of a product - multi-colored and without any barrier as regards language. On food, labeling informs about ingredients and on textiles about its best possible care.

FOR THE CUSTOMER'S BENEFIT

When it comes to using the devices, cab customers expect both a long service life and 100 per cent availability. All the printing and labeling processes have to be precise and reliable. Intuitive operability is a further criterion especially with alternating staff. On this basis, cab continuously develops ideas and assigns new technologies to real applications.

88 per cent of all the customers steadily rely on cab solutions - many of them for 20 or more years.

Long before Advanced Manufacturing and the Internet of Things became evident, cab devices did far more than just printing on a label. The products' architecture has always been designed according to easy operation, integration in automated production lines as well as reliability. The interfaces and protocols of cab's current printer generation enable bi-directional interaction with master networks, production planning or PLC.

Shaping innovation together

MADE IN GERMANY

As an owner-operated family company cab offers customer focus and economic continuity.

Foresight, ideas, added by curiosity and joy in its own products and their further development have always been driving forces in the company.

Local subsidiaries in Germany, France, America, South Africa and Asia form the basis to meet the individual markets in the best possible way.

COMPANY FACTS AND FIGURES

- founded 1975
- Sites in eight countries
- 100 million Euros group turnover in fiscal year 2021
- Industry leader in automated and high-precision labeling
- Europe's major manufacturer of label printing systems

■ Standard

Label printers MACH1, MACH2

MACH1 with control buttons and LED signal

MACH2 with colored LCD display and navigator pad

4" desktop printers in proven technology

With the MACH1 and MACH2 cab completes its printer range in the lower price segment.

The devices ideally fit with small to medium duty applications in thermal transfer and direct thermal printing.

MACH1 is provided with control buttons and a LED signal, while MACH2 has a colored LCD display and a navigator pad.

Label printers EOS2, EOS5

EOS2 for label rolls up to diameter 152 mm

EOS5 for label rolls up to diameter 203 mm

Compact printers providing many features of large industrial printers

The EOS combine all the functions of a solid label printer with highest ease of operation.

EOS2 is the compact one requiring little space, EOS5 processes label rolls up to diameter 203 mm.

The EOS mobile can be supplied for example with the battery pack provided by cab - wherever labels are needed but no socket for power connection is available.

■ Standard

Label printer MACH 4S

Label printer

MACH 4S to insert consumables from the front

Industrial printers to insert consumables from the front

MACH 4S printers provide all features of an industrial printer with a wide application range. Labels and ribbons are easy to insert from the front.

The large, colored touchdisplay with selfexplanatory symbols offers best operability. The centered material guide eliminates any need of adjustments.

Label printers SQUIX 2, SQUIX 4, SQUIX 6

SQUIX label printers with left-aligned material guide

Flexible printers for industrial applications

Whether operated stand-alone, linked to a PC or in a network – the rugged printers are always up to the mark. A large number of peripherals and software enable customer-specific solutions.

Basic devices providing a tear-off plate: They print on labels or on continuous materials wound on rolls or fanfold. Materials are torn off on a jagged plate. Cutting is an option, so is external rewinding.

Peel-off devices providing a rewinder internally: Peeling off labels is a feature added to a basic version. Labels are separated from the liner after printing to be removed by hand or by an applicator.

Labels can either be cut or perforated. Various peel-off adapters enable either automatic or manual dispensing. The labels can also be rewound for further processing.

For operation in production lines various applicators are provided that allow semi-automatic printing and applying.

Reliability

Due to comprehensive peripheral equipment the printers fully tackle any task, allowing to demonstrate their reliability in continuous operation in any working environment.

Tester for linear and 2D barcodes

Cutter and cutter tray

Internal rewinder

External rewinder

Applicators to be integrated in production lines

Demand module for packaging in motion

Label printers SQUIX 4 M, SQUIX 4 MT, SQUIX UHF RFID

SQUIX label printers with centered material guide

M series - precise and versatile

to print on all materials wound on rolls or reels or fanfold, in particular very small labels or slim continuous materials such as pressed shrink tubes.

MT series to print textile applications

In applications requiring high heat energies, a ribbon may stick with the textile tape after printing. A draw roller reliably separates the ribbon from the material.

Valid for both printer series:

Plungers remain fixed with all widths of material. There is no need of adjustment on the print head. Adapted print rollers are provided for slim materials

we identify more

Consistent know-how, high level vertical integration

All mechanical and plastic components used in cab devices and systems are manufactured in-house at the Sömmerda site. Facilities, machinery and equipment are always using the latest technology.

Substantial equipment provides the preconditions to economically manufacture even complex marking systems that set demanding requirements on production processes. The competencies for the whole process chain of electronics, mechanics and software are provided within cab.

Label printer XD Q

XD Q for printing on continuous materials such as shrink tubes or textiles

Printing in one operation on both sides of a material

The XD Q printer provides two print heads. A brush dissipates electrostatic charge subsequent to printing. When printing at high heating energy, a separator ensures reliable processes by separating the ribbon reliably from the material. An additional roller keeps the material in tension.

				■ Standard □ Option
Label printer			XD Q4/300	XD Q2/600

Tube labeling systems AXON 1, AXON 2

AXON 1 - identify lab samples reliably with **vertical** tube / vial orientation

Real time sample labeling

AXON devices label tubes or vials, with or without a closure cap.

On an AXON 1, these are inserted vertically upright, by hand or by an automated handling system.

Once tubes or vials have been inserted to the retainer, they can be filled and sealed.

		■ Standard □ Option
Tube labeling sys	stem	AXON 1
Print head	Thermal transfer	
	Thermal direct	
	Printable resolution dpi	300 / 600
	Print speed up to mm/s	100
	Print width up to mm	56.9
Tubes, vials	Orientation at the time of a label be applied	vertical

Print and apply systems **HERMES Q**

HERMES Q operated with an applicator – printing and applying labels in one operation

Fully automated labeling

If labels have to be printed in large quantities in manufacture lines and then applied fully automated to products or packaging in the same operation, HERMES Q is future-proof: In cases of products or label sizes changing, the applicator unit can be replaced individually. 2", 4" or 6" are maximum print widths

Labels provided to the left Labels provided to the right

Label dispensers **HS, VS**

HS60+ for horizontal dispensing

VS120 for vertical dispensing

VS180+ for wide labels up to 180 mm

Dispensing labels - automatical or on request

With the HS and VS all label sizes can be easily dispensed. Labels may be punched or cut without space in between. Any outside shape, square or round, can be processed. Even transparent material can be dispensed:

- With horizontal dispensers (HS) the labels are peeled off in upward direction from their bottom edge and stuck to the product.
- With vertical dispensers (VS) the labels are peeled off in forward direction from their upper edge and stuck to the product via the shortest path.

"+" models have an operation panel added

					■ Standard

Marking laser XENO 4

XENO 4 / 20 with a scan head

Durable marking of metal and plastics

It is possible to mark stagnant products in Medtech, aerospace, electronics and the automotive industries.

XENO 4 are diode-pumped and air-cooled. They have high beam quality and high pulse peak powers.

XENO 4 consist of two units: a control unit with an integral beam source, added by a scan head. The beam sources provide 20, 30 or 50 Watt maximum output power.

The XENO 4S model offers extra quick focus adjustment. Components can thus be marked sharp-edged, on a high depth of focus, on several levels - even if heights differ about 140 mm.

Shifting the focus with XENO 4S

					■ Standard			
Marking laser			XENO 4 / 20	XENO 4 / 30	XENO 4 / 50			
Beam source	cw output power	up to W	20	30	50			
	Pulse energy	mJ	1					
	Wave length	nm	1,064					
	Beam quality M ²		<1.8					
	Pulse width	ns						
	Pulse repetition freque	ency kHz	20 - 60	30 - 60	50 - 100			
	Connecting cable	m		2.5

	Scan head	mm		99 x 135 x 205				
	Width x Height x Depth							
	Scan head weight	kg		3				

■ Standard

Periphery samples for XENO 4 marking lasers

Laser safety housing LSG+100E

The LSG+100E offers an industrial solution for marking component series with a marking laser XENO 4. The rugged metal design besides a large work area provides enough space to integrate both the beam source and an industrial PC in a 19" assembly frame.

The operation door opens and closes electrically.

Laser label marker LM+

The LM+ allows to precisely mark labels of different sizes directly from the roll and cut them without the need of additional tools.

After the marking, the labels made of laser markable foil can either be separated with a cutter or rewound with an external rewinder.

Laser safety housing		LSG+100E 230 V	LSG+100E 120 V		
	Work area Width x Height x Depth	mm	980 x 46	0 x 980	
	Traversing speed	aversing speed up to mm/s		0	
	Positional accuracy	mm	0.0)2	
Device sizes	Width x Height x Depth	mm	1,000 x 2,2	80 x 1,120	
and weight	Weight	kg	39	5

Medical size allocation

Aluminum rating plates

Laser marking systems XENO 1, XENO 3

XENO 1 "out of the box" marking system

XENO 3 for durable plate marking

Compact desktop systems, requiring little footprint

XENO 1 and XENO 3 complement the range of cab laser marking systems in the lower price segment, complying with high industrial standards.

XENO 1

The automatic operation door opens or closes rapidly. Materials can be inserted by hand or by a handling system from three sides.

Interior LED lighting enables observing a workpiece while the operation door is closed.

XENO 3

is an integral laser system for marking metal and plastic plates permanently

Markings applied by a XENO 3 remain clearly legible even in the long term in rough surroundings.

Software for cab devices

Designing, printing, administrating with cablabel S3

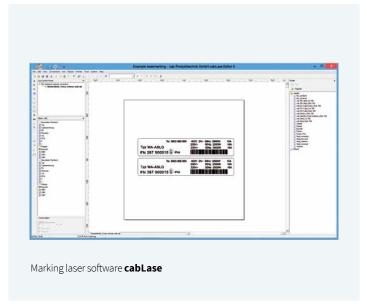

The cablabel S3 software opens up the full potential of cab devices. First of all, the label must be designed.

Only when it comes to printing it has to be decided whether the label shall be processed on a label printer, a print and apply or marking laser system.

cablabel S3 is of a modular design which makes it adaptable to requirements step by step. To support functions like native JScript programming, elements such as the JScript Viewer are embedded as plug-ins. The designer user interface and the JScript code are synchronized in real time. Special functions like the Database connector or barcode testers can be integrated.

Designing, controlling, monitoring with cabLase

cab marking lasers have installed cabLase Editor 5. It offers the key features

- · graphic design of layouts,
- control of marking,
- monitoring the marking process.

Further software features are

- support of marking without a PC,
- · remote control,
- remote API interface for integration in manufacturing processes,
- integrability in MES and ERP platforms.

Precise printing with cab labels

Standard materials are offered from stock, special labels can be manufactured user-specific from more than 400 materials.

Good reasons to choose cab labels

Label surfaces are optimized for high resolution in thermal transfer printing. The diameters of rolls and cores as well as windings correspond with cab printers. cab cooperates with a partner certified according to IATF 16949. Sampling is offered corresponding to PPAP methods. Three samples of stock materials:

Paper white - slightly glossy

Applications are address labeling as well as the marking of product and goods in general in industry, logistics, trading or services.

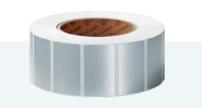

This material offers high whiteness combined with a permanent adhesive.

Polyester white - matt

Applications are with customized stock materials resp. storage locations, goods on consignment, outdoor and production areas as well as potential hazards.

This material is highly resistant to tearing, oils and extreme temperatures, repelling dirt and water.

Polyester silver - matt

Applications are with printers having a high printable resolution: e. g. product type-plates or indicating labels when labeling devices indoor and outdoor

This material convinces with a strong adhesive power on smooth surfaces and high resistance to extreme temperatures.

High-quality printing with cab ribbons

cab ribbons have a special back coating to avoid static electrification and better dissipate residual heat.

Good reasons to choose cab ribbons

Whether narrow or wide labels have to be applied, on products or typeplates - cab provides 10 types of ribbons for any demand. Tailored specifically for cab printers, they provide consistently high quality. Colored and outside-wound ribbons are available on request.

Wax ribbons

Fitting with fast and economical printing on vellum or coated paper, wax ribbons produce high-contrast, sharp and clear imprints with a high density. Recommended if wipe resistance is not a top priority

Resin/wax ribbons

Resin/wax ribbons provide a higher abrasion and scratch resistance than pure wax ribbons while offering the same density.

Recommen-ded for a bunch of applications with chromated or coated papers as well as plastics

Resin ribbons

Resin ribbons are highly resistant to scratching, extreme temperatures and dissolvers. They are therefore primarily used with plastic materials, even with coated surfaces. Ribbons withstanding washing and ironing are also provided

At home in any industry

A quarter of a million cab devices and systems are in continuous operation all over the world. They are in use in the automotive, chemical, pharmaceutical and textile industries, in electronics and medtech, transport and logistics as well as in retail and wholesale trading and the services sector.

Applications

Informational labels, warning labels, inventory, product labels, logging, labels for certification or testing, patient admission, pricing, storage location marking, shelf marking, address labels, shipping labels, incoming goods, tickets, typeplate marking, warranty labels, cable marking, tube marking, barrel labels, encoding, container labels, spare parts marking resp. identification

Customers

Services and training

Services

Well-trained cab service engineers worldwide support in the maintenance and repair of the devices.

Send your printer to a cab service center or a service partner selected by us. Your device will be checked and repaired within few workdays. If requested, a loan device will be offered.

You prefer maintenance and repair on-site in your company? Then make an appointment with our Services Department:

Phone +49 721 6626 300, Email: service.de@cab.de

Training

Enhance your know-how on cab devices with regard to an effective use, service and repair.

In Karlsruhe we offer trainings on the handling of the devices, label design, software, printer drivers, programming, database access as well as on how to integrate in networks or superior ERP systems. We gladly send you detailed information on all our current training offers on request.

Individually we offer trainings according to your specific demands – in Karlsruhe or on-site in your company.
